

# HP Designjet H35000 Printer series

Add versatility to your business with this affordable, intelligently designed printer series that converts easily from a roll-fed to a flatbed printer. Print directly on rigid display boards or flexible media using UV-curable inks with built-in HP quality.

Impressive results in an affordable, reliable printer.

- **Produce the print quality your customers demand.** Piezo printheads deliver variable-sized micro droplets of ink to achieve resolutions of 600 x 300, 600 x 600, and 1200 x 600 dpi. The six-color HP Designjet H35500 Printer delivers even higher apparent image quality—up to 1800 dpi.
- **Command attention.** HP Designjet 788 inks and variable drop-size printheads combine to produce a greater image detail and smoother color transitions across a wide variety of media.

Add the roll-fed and rigid media versatility you need.

- **Choose the media you want and print directly on it—no mounting required.** Print on flexible roll-fed materials such as banner vinyl, adhesive vinyl, canvas, paper, and backlit film or print directly on rigid material up to 1 inch (2.5 cm) thick and 96 inches (244 cm) in length. No laminating, transferring, or mounting required.
- **Reduce your printer's footprint without reducing functionality.** Designed to fit any space, this well-designed, hybrid UV printer easily converts from a roll-fed to a flatbed printer, minimizing floor space. The tables extend outward from 36 to 60 inches (91.4 to 152.4 cm) to support board lengths up to 96 inches (244 cm).
- **Save valuable time and cut costs.** Because the ink cures quickly with UV light exposure, you no longer need to wait for media to dry. Media is ready to go immediately, straight from the printer. And because you can print directly on rigid media, you no longer need to spend the extra time and material expense for mounting or laminating.

Work smarter with less effort with renowned HP quality.

- **Enjoy worry-free, self-service operation.** HP continues to build on years of experience to deliver the built-in reliability and ease-of-use your business expects from our products. HP engineers have thought through every detail. Designed for simplicity, this hands-off printer eliminates any need to clean the printheads manually and ensures that the printer is always ready to print.
- **What you used to do manually, the printer will do for you automatically.** The printer senses media edges and adjusts the print image precisely to the media position. Automatic printhead height adjustment allows the printer to accept and adjust to rigid sheet-fed media up to 1 inch (25 mm) thick.
- **Maximize usability and minimize training costs.** Redefine usability and minimize training time and costs with this simple, graphical, touchscreen control panel. This intuitive interface clearly displays printer status at a glance and enables easy navigation.
- **Expect accurate, consistent results from job-to-job, day-to-day, and media-to-media.** The printer aligns the printheads, ensures that every working jet fires a pixel at precisely the same location in both directions of travel, and detects individual jets that are misfiring and substitutes working jets for the missing jets. When used with the HP RIP Software, the printer performs automatic color calibrations using a high-resolution imaging sensor, photodiode, and embedded software. Get great results every time you print.
- **Experience HP's legendary quality and reliability.** To save your business time and simplify your workflow, the HP Designjet H35000 Printer series offers quality and trouble-free printing you can count on. And if you ever do need support, HP's high-quality support is among the best. Experience peace of mind, knowing you're covered.

No-drip, quick connect/disconnect HP Designjet 788 inks

Easy and intuitive 7 inch /17.7 cm color touchscreen front panel

# HP Designjet H35000 Printer series

1. Integrated front and rear roller tables fold down and out of the way for roll-fed operation, or fold out for printing rigid materials.
2. Automatic media thickness detection and motor-driven height adjustment to accommodate media up to 1 in/25.4 mm thick.
3. Media Edge Guides prevent head strikes caused by roll-fed media edge curl.
4. Dual-shuttered UV lamp housings eliminate special handling for various media thicknesses. User-replaceable UV bulbs lowering operating costs.
5. Printhead service station fully maintains printhead health. This hands-off design eliminates the need for wiping or dabbing of printheads and ensures the printer is always ready to produce top quality images.

6. Built-in static elimination discharges static build-up on both top and bottom surfaces of synthetic media.
7. Fully enclosed to provide protection from moving parts and stray ultraviolet light.
8. Adjustable Media Fence keeps rigid media feeding straight and prevents media skew.

The HP Designjet H35000 Printer series is designed to fit the needs of big and small print shops and specially suited for:

- POP
- Interior decoration
- Informational signage
- Banners

## HP Designjet H35000 Printer series at a glance

### HP Designjet H35100 Printer

54 in/137 cm

**4 colors**

**4 printheads (1 per color)**

Hybrid configuration

Billboard print speed at 600 x 600 dpi  
194 ft<sup>2</sup>/hr (18 m<sup>2</sup>/hr)

### HP Designjet H35500 Printer

54 in/137 cm

**6 colors**

**6 printheads (1 per color)**

Hybrid configuration

Billboard print speed at 600 x 600 dpi  
194 ft<sup>2</sup>/hr (18 m<sup>2</sup>/hr)

## Advanced Automation Eye

The HP Designjet H35000 Printer series uses a high-resolution imaging sensor, colorimetric spectrophotometer, and embedded software to automate the setup and calibration steps critical for achieving and maintaining print quality.

### Auto-set Calibration

Analyzes dot placement of printed patterns and automatically sets the head-to-head alignment and bi-directional (bidi) dot placement alignment to compensate for variable print speeds, head height settings, and media thickness.

### Auto-jet Calibration

Eliminates banding in prints and prolongs the useful life of printheads by mapping out jets that are not up to performance standards and compensating by using other jets in their place.

### Auto-tune Scheduler

Schedules the AutoJet Calibration to occur during unattended print runs to ensure maximum print quality and minimize waste or reprints.

### Auto-edge and Media Out Detection

Uses the image sensor to aid in the loading of rigid materials by detecting right, left, and leading edges allowing the printer to precisely position the media to begin printing.

### Color Calibration

The on-board spectrophotometer supplies color data to the external RIP's color management software to create custom ICC color profiles for your favorite 3rd party media. The color management system then adjusts the color to ensure accurate and consistent color.

### Color Profiling

This optional feature uses the on-board spectrophotometer. The printer prints and automatically reads hundreds of color swatches to allow the RIP and color management software to create custom ICC and color profiles for 3rd party media.
